

# SECURE CORD

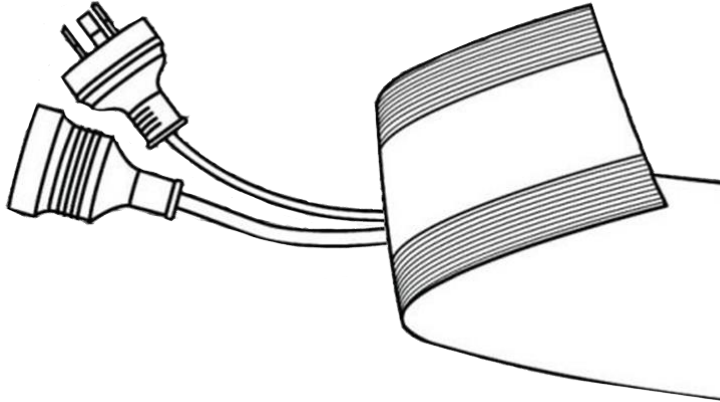

**Lightweight. Tough. Highly Versatile.**

Secure Cord presents an efficient way to manage loose cables on carpet and hard surfaces. Secure Cord reduces the risk of trips in the workplace or easily tidy up unsightly cords along walls and doorways.

Secure Cord's clever design makes it the lowest profile cord cover of its type and its 'cut to length' flexibility means no job is too big or small.

Measuring 100mm wide, Secure Cord is manufactured from a tough nylon material that is lightweight and flexible.

Installation is easy, cut the Secure Cord to the desired length with scissors, then simply place over the cables and press along the edges so that the hook strips attach to the carpet surface.

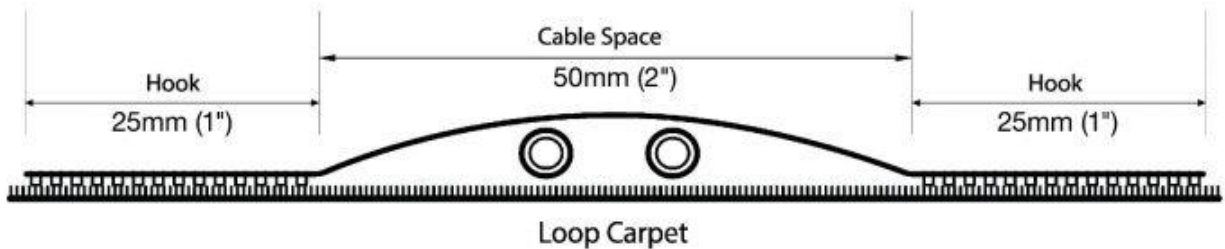

## Secure cords on carpet and hard surfaces

### For Carpets

Secure Cord Carpet is available in Black for discreet covering and Yellow for high visibility. Secure Cord Carpet, using a hook and loop system that hooks onto loop carpet, is reusable. It can be lifted to adjust the position, add/remove cables or remove and stored if no longer required at the location.

Lay Secure Cord over your cords and run your hands along the edges to fix in place. The hooks on the underside of Secure Cord grip the carpet to secure in place.

### For Hard Surfaces

Secure Cord Hard Surface is available in Black for discreet covering. Secure Cord Hard Surface converts non-carpet surfaces to be compatible with Secure Cord Carpet. Secure Cord Hard Surface features an adhesive under-side with loop strips on top that create the loop surface that the Secure Cord Carpet can attach to.

Alternatively, cords can be placed on the floor and Secure Cord Hard Surface can be placed on top, covering and securing the cables in place with the adhesive strips.

The adhesive on the Secure Cord Hard Floor is removeable but non-reusable.
